Female Sexual Orientation Genetics Research Depends on You

Sexual orientation is a fundamental trait of great scientific interest. Understanding the origins of sexual orientation will enable us to learn a great deal about sexual motivation, sexual identity, gender identity and sex differences. Our primary goals are scientific, but we also are hopeful for greater societal understanding.

To assist us in our research, we are seeking participants who are:

- cisgender (i.e., women assigned at birth as female)
- women (at least 18 years old)
- regardless of sexual orientation (e.g., lesbian, bisexual, straight)

Up to 10,000 participants will be enrolled by NorthShore University HealthSystem.

Participants will receive a gift card after providing DNA samples (saliva) and answering a questionnaire.

Principal Investigator
Alan R. Sanders, MD
